

Enhancements to IBRS / IDRS

Health Officer Role in IDRS

1. Health Officer's role in thin client follows jurisdiction/ownership rules and logic attributed to Coroners:

Health Officers have access to all records in their county of jurisdiction, regardless if a record is assigned or not assigned to them. As long as the Place of Death occurred in the Health Officer's county of jurisdiction, the death record is accessible to them.

2. On the screen for .Physician/Coroner a "Health Officer" option has been added to the checkbox.

Time of Death fields added to Funeral Director Tab in IDRS

These three fields are now captured in the demographic data entry process of the thin client death module:

- Type (Actual, Estimated, Presumed, Found)
- Time
- AM/PM

New Born Screening field addition in Birth Module

A "Religious Waiver" checkbox) has been added and may be checked in lieu of entering the new born screening number.

Birth Death Matching - Criteria change for Thick client Death Module

1. The automated Birth/Death matching process will run on a scheduled basis (i.e. weekly or monthly).
2. The automatic matching process will pick up all new eligible records and records contained in the manual work queue and apply the following conditions:
 - If the system finds a match, then both the birth record and the death record are updated.
 - If the system does not find a match and the record is <1 year, then record is moved to the Birth/Death Work Queue for additional processing.
 - If the system does not find a match and the record is >1 year, then record is not moved to the Birth/Death Work Queue and will never be picked up by the system for birth/death matching.

SSA PDF Forms - Change in SSA forms (now implemented for English & Spanish)

1. EBRS users may now print blank (*no data, no user input, no value from database*) SSA Forms (*Spanish and/or English*).
2. The IN EBRS users have the option to select from either the *SSA Form.English* and/or *SSA Form-Spanish* only if the value for .Request SSA. is .YES. for the active birth record.
3. The selected SSA is displayed within the birth application however the ability to print and/or save is facilitated through the Adobe Acrobat Reader (Adobe Controls).
4. End-user requirements:
 - a. Internet Explorer 6 browser or greater
 - b. Adobe Acrobat Standard 6 Reader (PDF plug-in) or greater
